

Flooring with a social touch

[Mivas](#) has a steady stream of work coming in. Work that is done on the assembly line. Products are put together correctly, processed or repackaged into the appropriate retail or promotional packaging and then inspected. Mivas is a socio-economic company that creates employment for people with a disability. On the regular job market their chances are very low, but at Mivas they work in a full-time position. Deriving pleasure and satisfaction from it. Something, which is passed on to the customers, because what Mivas delivers has won top ratings and quality awards several times. The customers they frequently work for include Procter & Gamble, Unilever and Lu, which have selected Mivas as a preferred partner. An impressive achievement!

There are a number of sites, Mivas 1 to 4. Each facility processes certain types of products. In Mivas 2, the activities include repackaging biscuits and Dutch rusk in twin packs for hotels. This means that these products are exposed to their environment, which must, therefore, meet strict hygiene standards. That is why Mivas 2 is a clean room environment. When this facility was newly built 2007, Bolidt installed a suitable clean room flooring system in the workshop, the Bolidtop® 700. Very smooth, resistant to all sorts of liquids and chemicals, but also to heavy loads and traffic of people, forklift trucks, objects and pallets. Bolidt was also allowed to exercise its profession in the [office](#) area. It was not necessary for Bolidt to take great pains to convince others that the system in the workshop met with approval. Mivas showed that itself the year after by having another [Bolidtop® 700](#) installed in the workshop of facility 1 as well. At both sites, Bolidt also finished the joints for optimally hygienic and smooth floor to wall transitions. The added advantage of Bolidt flooring systems for Mivas is that they comply with the high standards for the [food industry](#) (HACCP), are easy to clean and also hit the mark with regard to the employees. Some of them are in a wheelchair and others have difficulty walking. The smooth, jointless 700 system with a non-slip finish offers benefits and safety in this respect too. In due course, Bolidt might just become preferred partner for Mivas.
